

---

**What our lab studies:** Research in the Social Cognition Lab investigates the cognitive processes underlying social psychology and behavior. We are interested in how people perceive themselves, other people, and groups of people. Much of our research focuses on stereotyping and prejudice. The topics we are studying include: how people acquire stereotypes and prejudice, how stereotypes and prejudice affect our perceptions and memories of other people, the extent to which these biases are efficient or even automatic, and how people may or may not control unwanted stereotypes and prejudices.

**Description:** Research Assistants (RAs) will be responsible for running experiments in our computer labs. The typical (and ideal) time commitment is at least 6 hours, but this is potentially negotiable based on RA preferences. RAs are expected to work in the lab for at least 2 quarters if they are accepted.

1. What are you hoping to get out of your experience as a research assistant?

---

---

---

---

2. What makes you interested in the Social Cognition Lab in particular?

---

---

---

---

3. What previous experiences have you had that you believe would allow you to be successful in this position?

---

---

---

---

4. What are your post-graduate plans (if any; e.g., graduate school, medical school)?

---

---

---

---

5. List the upper division psychology coursework you have completed
